3PL Warehouse & Shipping Platform

Product name pending

The Modern Operating System for 3PL Warehouses

Manage your warehouses. Delight your clients. Ship faster.

The Problem

Many 3PL teams today rely on multiple disconnected systems and manual workflows:

- **Logging into different client storefronts** (Shopify, Amazon, etc.) just to pull orders — handling client credentials, creating security liability
- **Tracking inventory** on spreadsheets that are outdated the moment they're saved
- **Taking orders over email and phone** — then manually entering them into separate systems
- **Shipping across disconnected tools** — one site for labels, another for tracking, another for rates
- **Invoicing manually** — spending hours at the end of every month calculating what to charge each client

This doesn't just slow things down — it creates errors, security risks, and limits how fast you can grow. Every new client adds more complexity instead of more profit.

The Solution

A single, centralized platform with two dedicated interfaces:

Warehouse Dashboard	Everything your team needs to receive inventory, manage stock, fulfill orders, and ship — across all your warehouse locations, all in one screen.
Client Portal	A fully branded, self-service portal — with your logo and your identity — where your clients manage their own orders, inventory, and shipping. No more back-and-forth emails.

Plus: a built-in shipping engine — everything tools like Shippo and ShipStation offer (rate comparison, label generation, tracking) — but integrated directly into your warehouse workflow. No separate tools needed.

How It Works

Step 1 — Clients Send You Inventory

Your clients notify you when stock is on the way. Your team scans it in, verifies the count, and it's instantly live in the system — assigned to a bin, shelf, or zone at whichever warehouse location you choose.

No more handwritten receiving logs. No more "did that shipment arrive?"

Step 2 — Orders Flow In Automatically

No need to log into your clients' Shopify, Amazon, or other marketplace accounts. Orders flow into the platform automatically through direct integrations — or clients submit them directly through their portal (one at a time or thousands via bulk upload).

Need custom details? Clients can attach personalization info to every order — engraving text, custom messages, color selections, artwork uploads, and more.

No more accessing client accounts. No more credential sharing. No more manual data entry.

Step 3 — Your Team Fulfills

Your warehouse staff sees a clear pick queue on their screen or tablet. They go to the right bin, scan the right item, pack the box, and see any personalization details right on the packing screen. Step by step, error-free.

No more guessing. No more mis-picks. No more missed custom requests.

Step 4 — Shipping Made Simple

Clients can upload their own shipping labels, or purchase labels directly through the platform. The system compares rates across major carriers to find the best price. Address validation catches bad addresses before they become failed deliveries.

Upload a label or buy one. Either way — one click and it's done.

Step 5 — Everyone Stays Informed

The moment an order ships, your client gets tracking info automatically. They see every step — from "order received" to "delivered" — right in their portal. No phone calls, no emails.

Your clients always know where their orders stand.

Step 6 — Billing Runs Itself

Every pick, every label, every pallet stored — tracked and ready to invoice. You set your own prices. Generate professional invoices with a single click. Set a balance threshold and the system collects payment automatically when it's reached.

No more end-of-month billing nightmares. No more chasing payments.

Warehouse Dashboard

Everything your team needs to run operations — nothing they don't.

Live Overview

- Orders waiting to ship today — across all warehouse locations
- Staff activity and productivity
- Alerts: low stock warnings, approaching deadlines, incoming shipments

Multi-Warehouse Management

Add as many warehouse locations as you need — each with its own zones, aisles, bins, and staff. Manage everything from one dashboard.

- **Unified view** — see inventory and orders across all locations at a glance
- **Location-specific operations** — receiving, picking, and shipping scoped to each warehouse

- **Inventory transfers** — move stock between locations when needed
- **Per-location reporting** — performance metrics broken down by warehouse

Whether you run one warehouse or ten, it all lives in one system.

Receiving

- Scan inbound shipments to check in inventory
- Verify counts against what was expected
- Flag damaged or missing items with photos
- Assign stock to warehouse locations automatically

Inventory

- Real-time stock levels across every bin, shelf, and warehouse location
- See what's available, what's reserved for pending orders, and what's on hold
- Cycle counting with mobile barcode scanning
- Low-stock alerts so you never run out

Pick, Pack & Ship

- **Pick** — Staff get a clear list: go to this bin, grab this item, scan to confirm
- **Pack** — Scan items into the box, see personalization details on screen, print packing slip
- **Ship** — Compare rates, select carrier, print label — done
- Works on tablets, phones, and desktops — built for the warehouse floor

Returns

- Scan returned items back in
- Inspect, grade, and decide: restock, quarantine, or dispose
- Inventory updates automatically

Team Management

- **Assign tasks** to individual warehouse staff members
- **Track productivity** — see who completed what and when
- **Role-based access** — admin, picker, packer, shipper, receiver
- **Location assignment** — assign staff to specific warehouse locations
- **Accountability** — clear task ownership improves speed and reduces errors

Client Portal — Your Brand, Your Identity

This is what sets you apart from every other 3PL.

Your clients get their own login — a clean, modern portal that looks like **yours**.

Your Branding, Front and Center

- **Your company logo** appears on the client portal, packing slips, tracking pages, and email notifications
- **Your clients see your brand**, not ours — the platform is invisible to them
- **Professional appearance** — your clients will think you built this yourself
- **All communications** go out under your company name

Your clients never know you're using a third-party tool. It's your platform.

What Your Clients Can Do

Check Inventory

"How many units do I have left?" — they can see it themselves, in real-time, broken down by warehouse location if you operate multiple sites.

Submit Orders

Single orders, bulk CSV uploads, or automatic sync from their Shopify, Amazon, or other online stores. Fill in shipping details, attach notes, and submit.

Add Personalization to Orders

Clients selling personalized or custom products can include details with every order:

- **Text fields** — engraving names, custom messages, gift notes
- **Selections** — size, color, variant, material
- **File uploads** — artwork, logos, print-ready designs
- **Special instructions** — any custom handling notes

These fields are fully customizable for each client. Your team sees every detail on the packing screen — nothing gets missed.

Track Everything

Every order has a clear timeline: received, picking, packed, shipped, delivered. Tracking numbers update automatically.

Send Inbound Inventory

Clients create an inbound notice so your team knows exactly what's arriving, when, and to which warehouse location.

Request Returns

Clients initiate returns right from the portal. Your team processes them. Everyone stays in sync.

View Invoices & Charges

Every charge, every line item — transparent and downloadable. Priced exactly the way you configured it.

View Business Analytics

Clients can see analytics across their **entire business** from all connected marketplaces — Shopify, Amazon, WooCommerce, and more — all in one place. Order volume, sales trends, inventory performance, and shipping costs in a single unified view. No more logging into each marketplace separately to pull reports.

Built-In Shipping Engine

Everything that standalone shipping tools offer — built directly into your warehouse workflow.

Feature	What It Means
Upload or Purchase Labels	Clients upload their own shipping label, or purchase one directly through the platform — their choice
Rate Comparison	Compare rates across major carriers to find the best price or fastest option
Address Validation	Catches bad addresses before they become failed deliveries or returns
Automatic Tracking	Tracking numbers sent to clients and their customers automatically
Batch Processing	Handle hundreds of shipments at once on high-volume days

No separate shipping tool needed. No switching between platforms. It's all built in.

Centralized Order & Inventory Management

Feature	Benefit
---------	---------

Auto-sync from marketplaces	Orders pull in automatically from Shopify, Amazon, WooCommerce — no manual entry
No client account access needed	You never have to log into your clients' storefronts — orders come to you
CSV bulk upload	For clients who prefer spreadsheets or offline channels
Real-time inventory	Stock levels update instantly across all SKUs and all warehouse locations
Privacy & security	No more handling client credentials or accessing their accounts — eliminates liability

One system. All clients. All orders. All inventory. No more juggling.

Custom Pricing — You Set Your Own Rates

Every 3PL prices differently. This platform doesn't force a billing model — **you define exactly what you charge and how much.**

What You Can Price	How You Set It
Price per order	Flat fee per order fulfilled — you set the amount
Pick fee	Charge per item picked, or per order — your choice
Packing fee	Charge for packing labor — flat rate or per item
Box / packaging costs	Set prices per box size (small, medium, large, custom)
Multi-item orders	Base fee + per-additional-item fee for orders with multiple products
Storage fees	Per pallet, per bin, per shelf — by day, week, or month
Receiving fees	Per unit received, per shipment, or per pallet
Shipping label markup	Add your margin on labels purchased through the platform
Returns processing	Per return handled
Special handling	Fragile, oversized, kitting, gift wrap — add any custom fee
Minimum order fees	Set minimum charges per client if needed

Per-client overrides — give different clients different rates when needed (volume discounts, special agreements). The system tracks everything automatically, and invoices are generated with every line item broken down.

Your pricing. Your rules. The system just tracks it and does the math.

Automated Billing & Payments

Feature	How It Works
Automatic tracking	Every billable event (pick, pack, label, storage day) is logged in real-time
Auto-payment collection	Set a balance threshold — the system charges your client automatically when their balance reaches it
One-click invoicing	Generate detailed invoices with full line-item breakdown
QuickBooks integration	Syncs directly with QuickBooks for seamless accounting
Client transparency	Clients can view their charges and invoices right in their portal — no surprises

Billing that runs itself. Payments that collect themselves.

Integrations

Platform	How It Works
Shopify	Orders sync in automatically. Tracking pushes back to the store.
Amazon	Orders in, tracking out. No need to access client seller accounts.
WooCommerce	Same seamless sync.
BigCommerce / Walmart	Expanding marketplace support.
QuickBooks	Billing and invoicing sync directly with accounting.
Custom Systems	Full API available for any integration.
CSV Upload	Bulk upload for any system or offline channels.

Analytics & Reporting

For Your Warehouse

- Orders processed per day
- Fulfillment time and speed
- Error rates and picking accuracy
- Staff productivity and task completion
- Inventory accuracy and turnover
- Storage utilization across locations

For Your Clients

- **Unified business analytics** — view performance across all connected marketplaces in one dashboard
- Order volume and trends across Shopify, Amazon, WooCommerce, and more
- Inventory performance and shipping cost breakdown
- No more logging into each marketplace separately to pull reports

Both sides support CSV and PDF exports, plus scheduled email reports (daily, weekly, monthly).

Why This Matters

By consolidating your operations into one platform, you:

Benefit	Impact
Eliminate client account access	No more logging into Shopify/Amazon with client credentials — improves privacy and security
Reduce manual errors	Automated workflows replace spreadsheets and manual data entry
Increase speed	Faster fulfillment with directed pick/pack workflows and barcode scanning
Improve accuracy	Scan-verified picking and real-time inventory reduce mistakes
Professional client experience	Branded portal makes your operation look world-class
Scale without complexity	Adding new clients or warehouse locations takes minutes, not weeks

The Old Way vs. The New Way

Today	With This Platform
Log into each client's Shopify/Amazon to pull orders	Orders flow in automatically — no client account access needed
Track inventory on spreadsheets	Real-time inventory across all warehouses
Ship using separate tools (Shippo, ShipStation, carrier sites)	Built-in shipping — rate comparison, labels, tracking, all in one
Invoice manually at end of month	One-click invoicing with auto-payment collection
Clients call and email asking "where's my order?"	They check their own branded portal
Adding a new client = more chaos	Adding a new client takes 5 minutes
Adding a new warehouse = a new system	Add a new location in the same platform
No personalization support	Full custom fields — engraving, artwork, kitting instructions
Clients have no visibility into their business	Clients see unified analytics across all their marketplaces

Built for Growth

Multi-Client	Manage 5 clients or 500 — each with their own portal and isolated data
Multi-Warehouse	Add new locations anytime — one platform, unlimited warehouses
Your Branding	Your logo, your name — clients see your identity, not ours
Custom Pricing	Set your own rates for every service — different rates per client if needed
Personalization	Support custom, print-on-demand, and subscription clients other 3PLs can't handle
Team Management	Assign tasks, track productivity, and improve accountability across staff
Mobile-Ready	Warehouse staff work from tablets and phones on the floor
Integrations	Connect to Shopify, Amazon, WooCommerce, QuickBooks, and more
Secure	Every client's data is completely isolated — no cross-access

What's Next?

1. **Book a demo** — we'll walk you through the platform live
2. **Pilot program** — onboard your first 2-3 clients for free during setup
3. **Go live** — your warehouse and your clients are up and running

Stop managing your warehouse with spreadsheets and disconnected tools.

Start running it like a modern tech company.
